Explanation of the symbols

Read the instructions!

Device was tested with 2,5 kV AC voltage to check the device insulation.

Device ground terminal.

Waste Electrical and Electronic Equipment (WEEE) Directive 2002/96/EC; the affixed product label indicates that you must not discard this electrical/electronic product in domestic household waste.

Warnings

In this paper the following terms are used:

Danger
indicates that death, severe personal injury or substantial property damage will result if proper precautions are not taken.

Warning
indicates that death, severe personal injury or substantial property damage can result if proper precautions are not taken.

Caution
indicates that minor personal injury or property damage can result if proper precautions are not taken. This particularly applies to damage on or in the device itself.

General information

These paper contain the information that is necessary for the proper and safe operation of the described devices. This paper is intended for technically qualified personnel.

Warning!
Hazardous voltage is present inside the device during operation. Disregarding of safety rules can result in severe personal injury or property damage.
Only qualified personnel may work with described devices after being familiar with warnings and safety notices in this paper and other safety regulations.

Warning!
Device must operate completely assembled! Device must be used as described. No modifications of the device should be made.

Warning!
Do not open device while it is energized! Hazardous voltage is present inside the device. Disconnect all connectors before opening!

Warning!
If device is damaged disconnect it from power supply! Send it to the manufacturer for inspection.

Warning!
Connect to earth before attaching power supply!

---

2 CMU 100 SYSTEM

2.1 DESCRIPTION

Communication unit (CMU 100) is modular system of communication devices that can be used for various of tasks such as:

- communication converter (for example RS232 to RS485)
- star coupler (for example 1 fiber optic to 7 fiber optics)
- repeater (for example RS485/485)
- communication isolator (for example for preventing ground loops)
- communication listener - debugger
- PC serial com port extender (for example USB to 4 serial com)

CMU 100 device is a couple of software and hardware. For different purposes, different software versions and different hardware configuration have been developed.

2.1.1 SOFTWARE

Software is application dependent and allows different hardware configurations. Software's task is switching between communication ports and allows almost any combination between them.

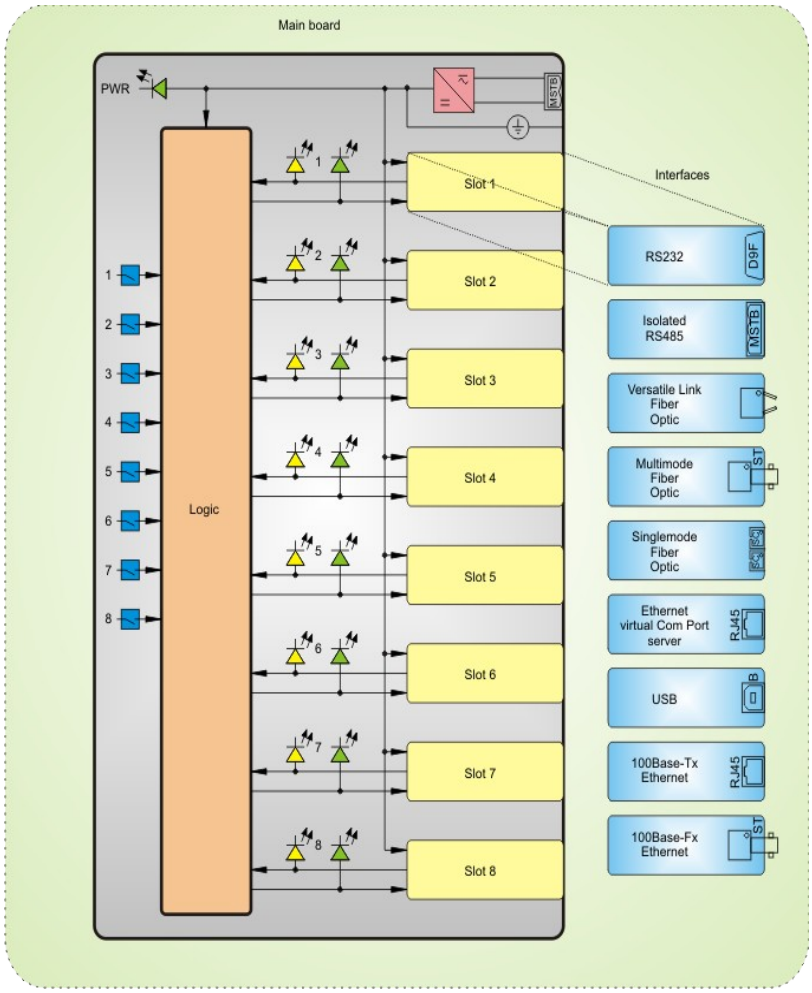
2.1.2 HARDWARE

Hardware is based on main board with power supply and port switching logic. On that board, interface boards are attached. CMU 100 can handle up to 8 different interface boards. Currently available interface boards:

- RS232
- isolated RS485
- Multimode Fiber Optic with ST and SMA connectors
- Singlemode Fiber Optic with SC connectors
- Versatile Link Fiber Optic
- USB
- ethernet (with one virtual com port)

Housing is aluminium and intended for mount on standard DIN 35 rail (acc. to DIN EN 50022). 3 different housings have been made. Depends on how many interfaces device has, appropriate housing is used.

Hardware settings
All settings on the device can be made from outside by a DIL switch. It is not necessary to open the housing.



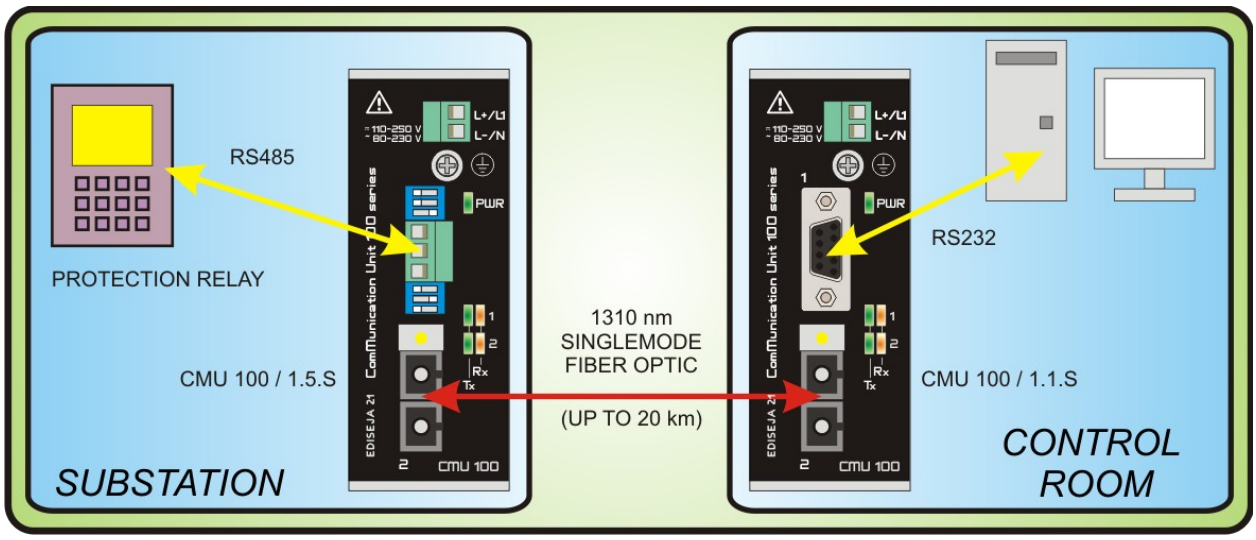
Picture 1: CMU 100 system general diagram

3 RS485 TO SINGLEMODE FIBER OPTIC CONVERTER

3.1 DESCRIPTION

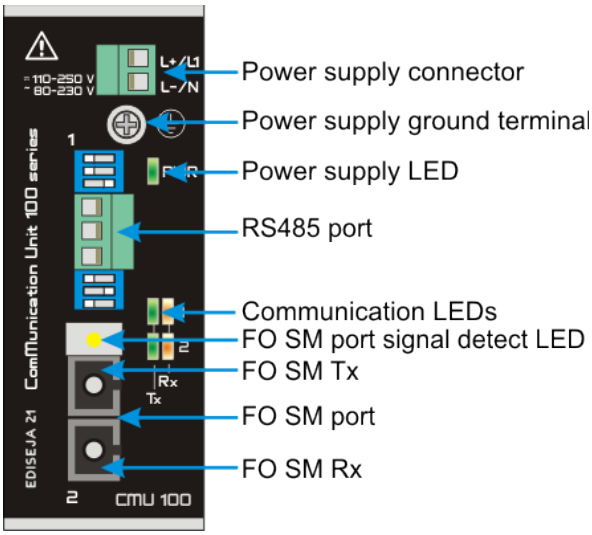
This device allows communication between two devices with different communication interfaces. It contains one RS485 and one 1310 nm wave lenght singlemode fiber optic interface. Data is send from multimode fiber optic to singlemode fiber optic and vice versa simultaneously. Device allows data speed up to 115,2 kbit/s. Singlemode interface range is approximately 20 km.
Wide power supply voltage allows connection to all common station batteries. Additionaly it can be also connected to standard AC voltages.
This device is intended for use in cubicles and cabinets in all kinds of power production, transmission and distribution stations. It requires no maintenace. All normaly used connectors, switches and light indicators are accessed at the front side of the device. One light indicator indicates power supply voltage, others indicate communication transfer.
Fiber optic communication allows longer distances between devices without electromagnetic disturbances.

3.2 TYPICAL APPLICATION



Picture 2: Typical application

3.3 APPEARANCE



Picture 3: Front view

3.4 HARDWARE DESCRIPTION

This configuration of device is made from main board (power supply, LEDs), one multimode fiber optic interface board and one singlemode fiber optic interface board.

3.4.1 MAIN BOARD

Power LED indicates that device is turned on. The right LEDs of one port shows activity on receive (Rx) line and the left one shows activity on transmit (Tx) line.

Ports Configuration

Port	1	2
Interface	RS485	FO SM

3.4.2 RS485 INTERFACE BOARD

Description

Single, galvanically isolated, half duplex, RS485 port with Phoenix 3 pin screw connector, with automatic switch to receive after end of transmission and with additional terminating and stabilizating resistors.

Hardware settings

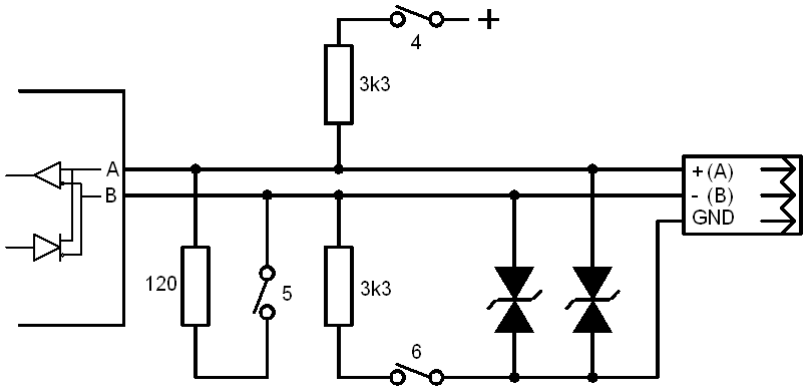
For proper functioning of that board some settings must be done:

- RS485 bus termination and stabilisation
- baud rate

RS485 bus termination and stabilisation

TERMINATION
At high transmission rates or long distance, RS485 bus termination is necessary.
The termination on RS485 bus must be set on both ends of the RS485 bus.

STABILISATION
Some device, to work properly, demands that RS485 must always be in known and valid state. That is, when + (positive) pin is more than 200 mV positive than – (negative) pin. Pins + and – are sometimes marked as A and B. In case that no device on RS485 bus is transmitting or in case of short circuit, there is no voltage difference between those pins and some device do not work correctly.
On this port board so called „true fail-safe“ RS485 chip is used so board works correctly without stabilisation at invalid RS485 bus state. But still switches for stabilisation are provided on port board. **The stabilization on RS485 bus may be set on one device only!**



Picture 4: RS485 BUS schematic

Switches at the lower side of connector:

Switch	4	5	6
Description	RS485 stabilisation	RS485 termination	RS485 stabilisation

Switches at the upper side of connector:

BAUD rate

bit/s			Switch		
Interface 5	Interface M	Interface L	1	2	3
19200	4800	300	OFF	OFF	OFF
38400	9600	600	OFF	OFF	ON
57600	19200	1200	OFF	ON	OFF

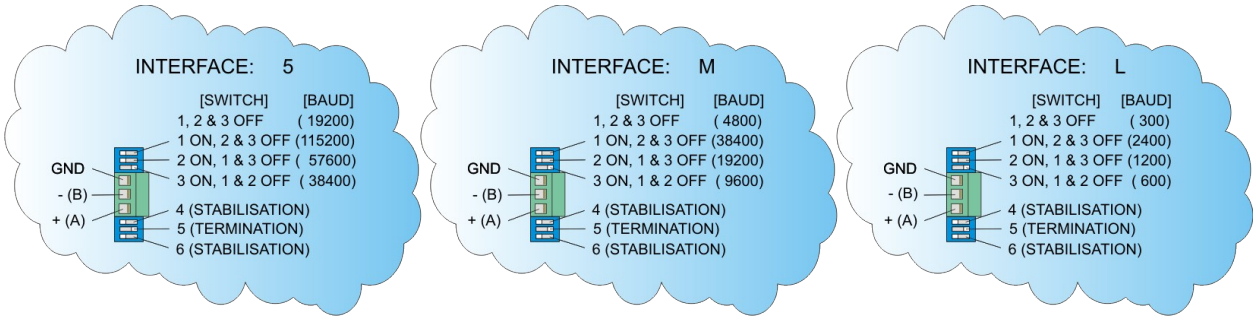
bit/s			Switch		
115200	38400	2400	ON	OFF	OFF

BAUD rate setting 19,2 kbit/s is valid for all standard communication protocols, that do not request special timings. If special protocols (small request-respond time required) are used please note it in order.

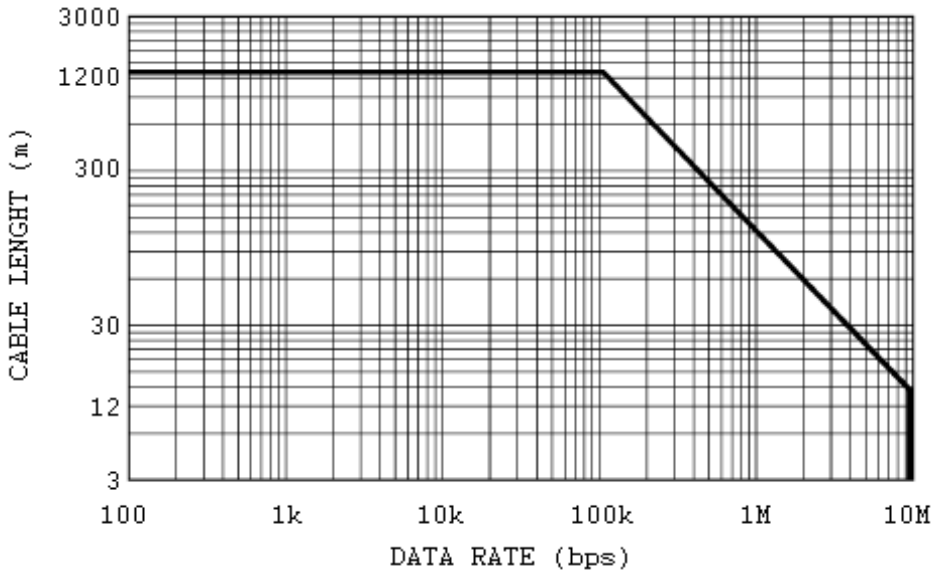
NOTE! If there are problems with communication, try using higher speed setting. Some manufacturer have different markings for B and A line. Try to switch A and B wires. See http://en.wikipedia.org/wiki/RS-485 for detailed information.

Connector pin table

MSTB	1	2	3
Description	GND	- (B)	+ (A)



Picture 5: RS485 interface board appearance with switch settings



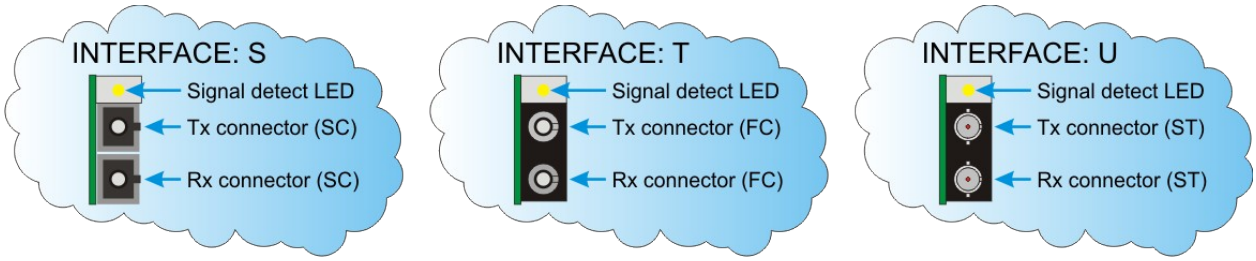
Picture 6: Standard data rate vs cable lenght

3.4.3 SINGLEMODE FIBER OPTIC INTERFACE BOARD

Description

Full duplex, singlemode, 1310 nm, up to 2,048 Mbit/s fiber optic port with SC connectors (interface S), FC connectors (interface T) or ST connectors (interface U). This interface allows transmission up to 20 km. Signal detect LED is activated, when receiver receives enough light signal from transmitter from another end of the fiber cable.

Warning!
Radiation emitted by single mode laser devices can be dangerous to human eyes. Avoid eye exposure to direct or indirect radiation.



Picture 7: Singlemode fiber optic interface board appearance

5 INSTALLATION

5.1 INSTALLATION

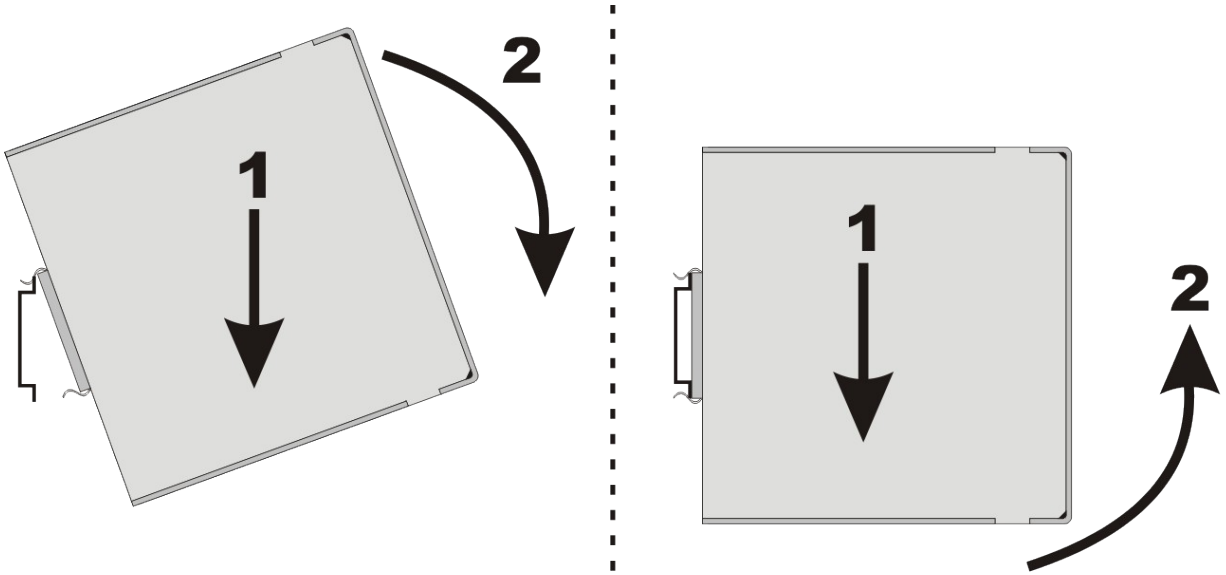
Warning!

Hazardous voltage is present inside the device during operation. Disregarding of safety rules can result in severe personal injury or property damage.

Only qualified personnel may work with described devices after being familiar with warnings and safety notices in this paper and other safety regulations.

Following instruction must be taken into consideration:

- The device must be accessible to qualified personnel only.
- The device is permitted to operate in enclosed housing or cabinet only.
- The device location must be vibration-free.
- The admisible operating temperature must be observed.
- Check the device for damage at unpacking. If device is damaged it must not be installed but it should be send to the manufacturer for repair.
- The device should not be opened.
- The device should be mounted on a 35 mm rail (acc to EN 50022).
- Attach ground wire before attaching power supply. Device must be grounded during operation!
- Single core or stranded wire 0,5 – 2,5 mm^2 must be used for power supply connection. If stranded wire is used, ferrules must be used to prevent fraying. Recommended stripping lenght is 5 mm.
- Protective earthing wire must be terminated with tinned copper ear terminal.
- The prescribed bending radius of the optical fibre cables must be observed.



Picture 9: left. installation, right: deinstallation

6 COMMISSIONING & MAINTENACE

6.1 COMMISSIONING

Warning!
Hazardous voltage is present inside the device during operation. Disregarding of safety rules can result in severe personal injury or property damage.

Only qualified personnel may work with described device after being familiar with warnings and safety notices in this paper and other safety regulations.

Following instruction must be taken into consideration:

- Device must operate completely assembled! Device must be used as described. No modifications of the device should be made.
- Attach ground wire before attaching power supply. Device must be grounded during operation!
- Check if the power supply voltage complies with device operation voltage.
- Do not open device while it is energized! Hazardous voltage is present inside the device.
- If single mode fiber optic interface is used, do not look into the laser beam.

6.2 MAINTENANCE

The device is maintenance-free. Disconnect power supply before cleaning it. Use moist cloth. Do not use liquids.

7 TECHNICAL DATA
