1 PREFACE

Liability statement

We have checked the contents of this manual to ensure that the descriptions of both hardware and software are as accurate as possible. However, deviations may occur so that no liability can be accepted for any errors or omissions contained in the information given.

The contents of this manual will be checked in periodical intervals, corrections will be made in the following editions.

We reserve the right to make technical improvements without notice.

Explanation of the symbols

Read the instructions!

Device was tested with 2,5 kV AC voltage to check the device insulation.

Device ground terminal.

Waste Electrical and Electronic Equipment (WEEE) Directive 2002/96/EC; the affixed product label indicates that you must not discard this electrical/electronic product in domestic household waste.

Warnings

In this paper the following terms are used:

Danger

indicates that death, severe personal injury or substantial property damage will result if proper precautions are not taken.

Company:	Device:	Document:	Code:	Date:	Page:
Ediseja 21	CMU 100 / 1.6.9 - 0	User manual	CMUMU169	01.09.2019	3

Warning

indicates that death, severe personal injury or substantial property damage can result if proper precautions are not taken.

Caution

indicates that minor personal injury or property damage can result if proper precautions are not taken. This particularly applies to damage on or in the device itself.

General information

These paper contain the information that is necessary for the proper and safe operation of the described devices. This paper is intended for technically qualified personnel.

Warning!

Hazardous voltage is present inside the device during operation. Disregarding of safety rules can result in severe personal injury or property damage.

Only qualified personnel may work with described devices after being familiar with warnings and safety notices in this paper and other safety regulations.

Warning!

Device must operate completely assembled! Device must be used as described. No modifications of the device should be made.

↑ Warning!

Do not open device while it is energized! Hazardous voltage is present inside the device. Disconnect all connectors before opening!

\wedge

Warning!

If device is damaged disconnect it from power supply! Send it to the manufacturer for inspection.

Warning!

Connect to earth before attaching power supply!

2 CMU 100 SYSTEM

2.1 DESCRIPTION

Communication unit (CMU 100) is modular system of communication devices that can be used for various of tasks such as:

- ◆ communication converter (for example RS232 to RS485)
- ◆ star coupler (for example 1 fiber optic to 7 fiber optics)
- repeater (for example RS485/485)
- communication isolator (for example for preventing ground loops)
- communication listener debugger
- ◆ PC serial com port extender (for example USB to 4 serial com)

CMU 100 device is a couple of software and hardware. For different purposes, different software versions and different hardware configuration have been developed.

2.1.1 SOFTWARE

Software is application dependent and allows different hardware configurations. Software's task is switching between communication ports and allows almost any combination between them.

2.1.2 HARDWARE

Hardware is based on main board with power supply and port switching logic. On that board, interface boards are attached. CMU 100 can handle up to 8 different interface boards. Currently available interface boards:

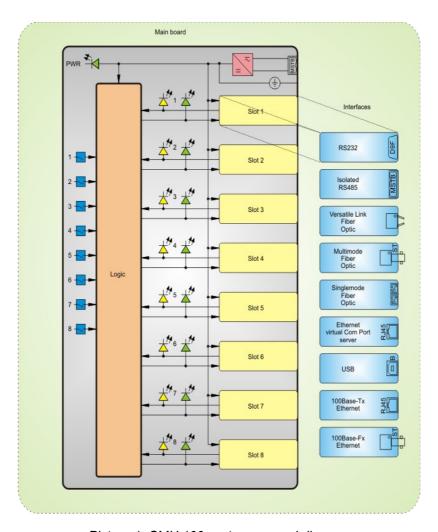

- ♦ RS232
- ♦ isolated RS485
- Multimode Fiber Optic with ST and SMA connectors
- Singlemode Fiber Optic with SC connectors
- Versatile Link Fiber Optic
- ♦ USB
- ethernet (with one virtual com port)

Housing is aluminium and intended for mount on standard DIN 35 rail (acc. to DIN EN 50022). 3 different housings have been made. Depends on how many interfaces device has, appropriate housing is used.

Hardware settings

All settings on the device can be made from outside by a DIL switch. It is not necessary to open the housing.

3 MULTIMODE FIBER OPTIC TO ETHERNET CONVERTER

3.1 DESCRIPTION

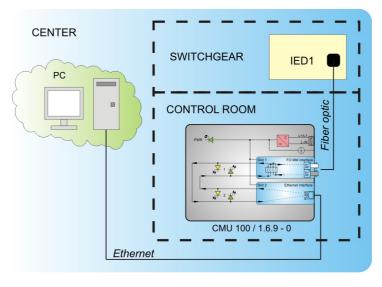

This device allows communication between two devices with different communication interfaces. It contains one 820 nm wave lenght multimode fiber optic end one ethernet interface. Data is send from 820 nm wave lenght multimode fiber optic to ethernet and vice versa.

Wide power supply voltage allows connection to all common station batteries. Additionally it can be also connected to standard AC voltages.

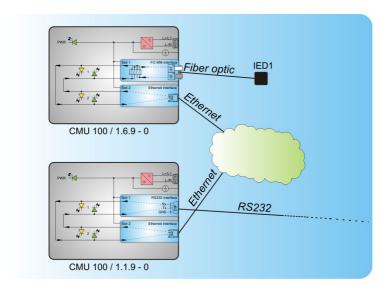

This device is intended for use in cubicles and cabinets in all kinds of power production, transmission and distribution stations. It requires no maintenace. All normaly used connectors, switches and light indicators are accessed at the front side of the device. One light indicator indicates power supply voltage, others indicate communication transfer.

Fiber optic communication allows longer distances between devices without electromagnetic disturbances. Fiber optic logic can be set to positive or negative logic for transmitter and receiver separatedly. They can be set by DIP switch at the front side of the communication interface.

3.2 TYPICAL APPLICATION

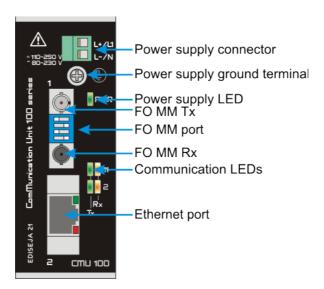

Picture 2: Typical application

Picture 3: Typical application

3.3 APPEARANCE

Picture 4: Front view

3.4 HARDWARE DESCRIPTION

This configuration of device is made from main board (power supply, LEDs), one multimode fiber optic interface board and one Ethernet board.

3.4.1 MAIN BOARD

Page:	Company:	Device:	Document:	Code:	Date:
8	Ediseja 21	CMU 100 / 1.6.9 - 0	User manual	CMUMU169	01.09.2019

Power LED indicates that device is turned on. The right LEDs of one port shows activity on receive (Rx) line and the left one shows activity on transmit (Tx) line.

Ports Configuration

Port	1	2
Interface	FO MM	Ethernet

3.4.2 MULTIMODE FIBER OPTIC INTERFACE BOARD

Description

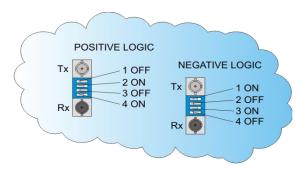

Single, full duplex, multimode, fiber optic port with ST connectors with positive or negative logic.

Hardware settings

For proper functioning of that board, optic logic must be set:

Fiber optic logic settings

3.4.3 ETHERNET INTERFACE BOARD

Description

10/100Base-TX ethernet port with one serial com port server and RJ45 connector. It enables communication on serial port with 300 bit/s to 921,6 kbit/s. Additional programs can create virtual com port on computer, which is connected to the CMU IP number. This interface also enables connection between two CMU devices via ethernet.

Picture 7: Cable

If device is connected to the switch, TIA/EIA 568A or TIA/EIA 568B cable should be used. If device is connected to the PC without cable detection option, TIA/EIA 568A CROSSOVER or TIA/EIA 568B CROSSOVER should be used.

Software setting

For using this interface two programs are needed: CPR Manager and Installer. Both can be obtained from www.ediseja21.com\cmu100-2ports.htm or www.lantronix.com. CPR Manager is needed for setting and redirecting Ethernet port to the virtual com port on PC. Installer is needed for setting serial com port speed, parity, flow control,...

3.4.3.1 LANTRONIX CPR MANAGER

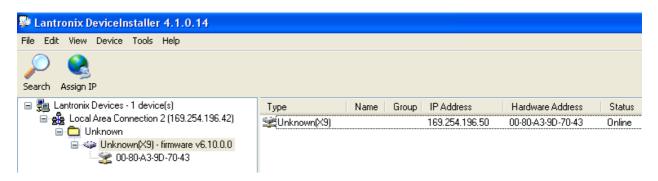

Picture 8: CPR Manager program

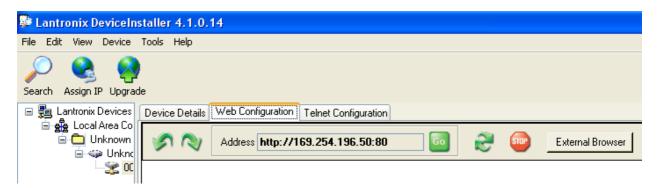

Set CMU IP number and TCP Port to 10001 to Com port that is needed.

NOTE! Press "Save" to save settings!

3.4.3.2 LANTRONIX INSTALLER SETTINGS

Picture 9: Start program and press "Search" to find device, then select device to be set

Picture 10: Press "Web Configuration"

Picture 14: Hostlist settings

Page:

15

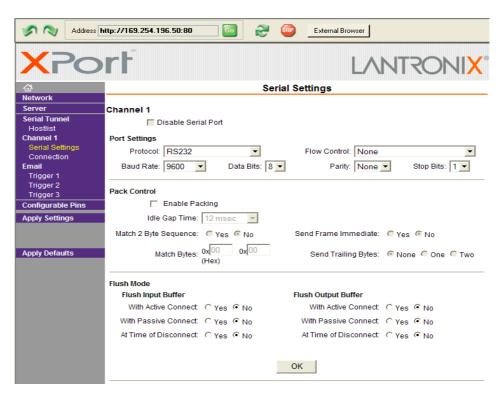

Picture 15: Connection settings

"Endpoint Configuration/Local Port" settings must be set at 10001!

If two CMU devices need to be connected via ethernet port, set following also:

- ◆ "Connect Mode / Active Connection / Active Connect to Auto Start
- ◆ "Endpoint Configuration / Remote Port" to 10001
- "Endpoint Configuration / Remote Host" to other CMU IP.

Picture 16: "Port settings/Protocol" settings must be set at RS232! Set other port settings according to your needs.

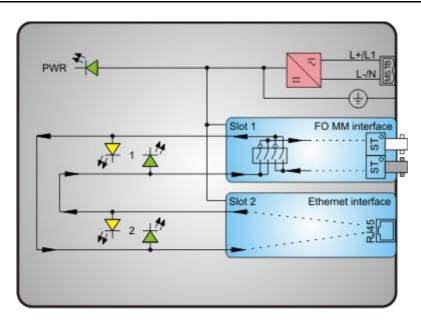

NOTE! Always press "OK" when settings is changed. Press "Apply Settings" to save settings into device! Wait for device to reset.

NOTE! While device is resetting, it is recommended that web browser is restarted. Otherwise old settings may be displayed in web browser after device restarts.

5 INSTALLATION

5.1 INSTALLATION

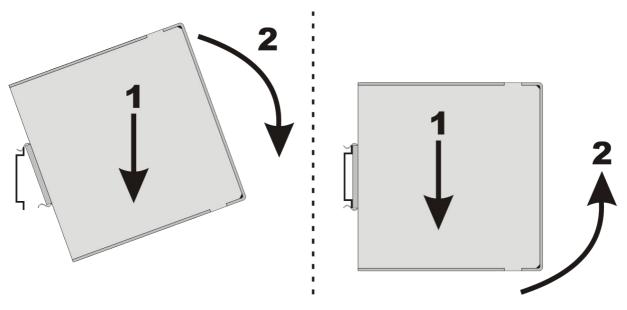

Warning!

Hazardous voltage is present inside the device during operation. Disregarding of safety rules can result in severe personal injury or property damage.

Only qualified personnel may work with described devices after being familiar with warnings and safety notices in this paper and other safety regulations.

Following instruction must be taken into consideration:

- ◆ The device must be accessible to qualified personnel only.
- ◆ The device is permitted to operate in enclosed housing or cabinet only.
- ◆ The device location must be vibration-free.
- ◆ The admisible operating temperature must be observed.
- Check the device for damage at unpacking. If device is damaged it must not be installed but it should be send to the manufacturer for repair.
- ◆ The device should not be opened.
- ◆ The device should be mounted on a 35 mm rail (acc to EN 50022).
- ◆ Attach ground wire before attaching power supply. Device must be grounded during operation!
- ♦ Single core or stranded wire 0,5 2,5 mm² must be used for power supply connection. If stranded wire is used, ferrules must be used to prevent fraying. Recommended stripping length is 5 mm.
- Protective earthing wire must be terminated with tinned copper ear terminal.
- ◆ The prescribed bending radius of the optical fibre cables must be observed.

6 COMMISSIONING & MAINTENACE

6.1 COMMISSIONING

Warning!

Hazardous voltage is present inside the device during operation. Disregarding of safety rules can result in severe personal injury or property damage.

Only qualified personnel may work with described device after being familiar with warnings and safety notices in this paper and other safety regulations.

Following instruction must be taken into consideration:

- ◆ Device must operate completely assembled! Device must be used as described. No modifications of the device should be made.
- ◆ Attach ground wire before attaching power supply. Device must be grounded during operation!
- ◆ Check if the power supply voltage complies with device operation voltage.
- ◆ Do not open device while it is energized! Hazardous voltage is present inside the device.
- ◆ If single mode fiber optic interface is used, do not look into the laser beam.

6.2 MAINTENANCE

The device is maintenance-free. Disconnect power supply before cleaning it. Use moist cloth. Do not use liquids.
